THRIVE AFRICA

OSINT INVESTIGATION REPORT

OSINT & Threat Intelligence

Organization investigated	Thrive Africa — thriveafrica.co
Investigation type	Passive, public-source OSINT review
Report date	28 October 2026
Scope	Public web pages and publicly indexed information only

Executive Summary

This report documents a limited passive Open-Source Intelligence (OSINT) review of Thrive Africa, using publicly accessible pages associated with thriveafrica.co and its internship programme. The organization's public website describes a mission focused on helping Africans gain digital skills and career opportunities, and publicly lists programmes, contact channels, and a location in Accra.

The review identified public-facing information categories that are useful to legitimate visitors but could be misused if not managed carefully: organizational and programme details, official contact channels, a public office location, and information about the internship programme. These are not automatically vulnerabilities. They could support impersonation or targeted phishing if combined with deceptive messages.

No claim is made that Thrive Africa has been breached, that its systems are vulnerable, or that sensitive information has been leaked. The preliminary assessment is a Low to Moderate potential information-exposure risk relating mainly to social engineering. This is a qualitative assessment, not a technical security rating.

Objectives

- Identify public information about Thrive Africa and its digital presence.
- Review public contact and programme information that could be relevant to social engineering.

- Separate verified observations from potential risks and assumptions.
- Recommend proportionate controls to reduce misuse of public information.

Scope, Methodology and Ethics

Scope

Publicly accessible official pages and publicly indexed search results. This report refers specifically to the digital-skills organization using thriveafrica.co, rather than other organizations with similar names.

Methods

Public search-engine research; review of the About, Contact, Internship and cybersecurity programme pages; and qualitative analysis of possible security implications.

Excluded activities: No port scanning, vulnerability scanning, password testing, login attempts, exploitation, social engineering, or access to restricted data was performed.

Limitations: This was a time-bounded review of selected sources. It does not assess internal controls, cloud configuration, DNS security settings, employee awareness, or the completeness of search engine results. Absence of a finding is not proof that an issue does not exist.

Ethical handling: Only public information was considered. No staff were contacted, and unnecessary personal information was not collected or reproduced.

Organization Profile and Public Digital Footprint

The official About page describes Thrive Africa as an organization aiming to expand access to digital skills and career opportunities for Africans. Its public website describes learning, practical experience and career support as parts of its model.

The public internship page describes mentor-guided projects and lists cybersecurity among its training pathways. A separate cybersecurity internship page describes an eight-week track and includes OSINT as a project area.

The official Contact page publicly lists phone/WhatsApp contact channels and a visit location at ComUnity Spaces, 5 Bobo Street, Accra. It also warns visitors to use the organization's listed official numbers and cautions that other numbers claiming to represent Thrive Africa may be fraudulent.

Public URLs reviewed:

https://www.thriveafrica.co/

https://www.thriveafrica.co/about-us

https://www.thriveafrica.co/internships

https://internships.thriveafrica.co/program/cybersecurity-program

https://www.thriveafrica.co/contact-us

These URLs are public web assets identified during the review. This report does not assert that every listed domain or service has been technically tested.

List of Findings

The following findings distinguish directly observed public information from possible misuse. Risks are scenarios, not evidence of actual incidents.

ID	Observation / evidence	Potential security implication	Initial risk
F-01	The official website describes the organization's mission, learning model and career-support activities.	A scammer could reuse genuine programme language to make a fake training or scholarship message seem credible.	Low–Moderate
F-02	Public pages describe internship structure, mentoring, projects and cybersecurity offerings.	Details could be copied into fake opportunity messages asking applicants for money, credentials or personal documents.	Moderate
F-03	The Contact page publishes contact channels and an Accra visit location.	Public contact details can be copied or spoofed; someone could impersonate staff or create a look-alike channel.	Low–Moderate

F-04	The Contact page warns users to use official numbers and cautions against other numbers claiming to represent the organization.	This makes contact-channel verification a relevant awareness topic; it does not prove an incident occurred.	Moderate
F-05	Reviewed pages identify several website and programme URLs, including a separate internship subdomain.	Users may be confused by look-alike or unexpected URLs. No malicious look-alike domain was confirmed.	Low
F-06	This review did not establish leaked credentials, exposed internal documents or confirmed technical vulnerabilities.	This is not proof that none exist; a separate authorized technical assessment would be needed.	Not assessed

Potential Social Engineering Scenarios

Fake internship or scholarship message

An attacker copies programme descriptions and claims a recipient has been selected, then directs them to a fake form or requests payment or credentials. Public programme details could make the message convincing. Controls: verify opportunities through official website links and published contact channels; never share passwords; explain legitimate payment requirements clearly on official pages.

Contact-channel impersonation

Someone creates a similar-looking social account or uses an unverified number while claiming to represent Thrive Africa. The public contact page's warning about official numbers provides a useful basis for awareness. Controls: repeat official-channel guidance in onboarding messages; provide a route to report impersonation; do not rely on caller ID or profile photos as proof of identity.

Targeted phishing

A message references a real course, mentor session or project deadline to pressure a learner or staff member into opening a link or sharing information. This is hypothetical, not a

confirmed attack. Controls: inspect sender addresses and full URLs, verify urgent requests through a second channel, and report suspicious messages.

Risk Analysis

Ratings are qualitative estimates based on the possible misuse of information visible in reviewed sources.

Risk	Impact	Rating	Reasoning
Fake internship / opportunity	Medium	Moderate	Public programme information could be reused in scam messages; possible harm includes loss of money or personal data.
Fake contact number or account	Medium	Moderate	Published contact information can be copied or spoofed; no incident was verified.
Confusion about official URLs	Medium	Low–Moderate	Users may overlook a look-alike domain or unexpected URL; no malicious domain was confirmed.
Leaked credentials / technical exposure	High if present	Unrated	The review did not test technical configurations or establish leaked secrets.

Recommendations

- Reinforce official contact verification. Keep contact details consistent across official pages and programme communications. Tell applicants not to trust a number or account merely because it uses the organization’s name or logo.
- Publish anti-impersonation guidance. Provide a clear reporting route for fake accounts, suspicious payment requests and fraudulent internship offers. Encourage users to navigate to the official website directly.

- Improve phishing awareness. Train staff, mentors and learners to check sender addresses and URLs, report suspicious messages, and verify urgent requests through a second channel.
- Minimize public disclosure. Periodically review pages and downloadable documents to ensure personal information, internal contact lists, private meeting links, credentials and confidential operational details are not published accidentally.
- Maintain domain and website governance. Keep an inventory of official domains and subdomains; restrict who can publish DNS or website changes; enable multi-factor authentication for administrative accounts; and review registrar and hosting access.
- Conduct technical checks only with authorization. If required, obtain written permission and a defined scope before checking DNS configuration, TLS, security headers or exposed services. This report does not claim those tests were performed.
- Monitor for impersonation. Periodically search for fake social profiles, look-alike domains and publicly indexed documents misusing the organization’s name. Escalate suspected incidents through an established response process.
- Keep evidence-based records. Record the URL, date checked, screenshot, observation and security relevance. Separate confirmed facts from hypotheses and avoid publishing unnecessary personal details.

Conclusion

This passive OSINT review identified public information about Thrive Africa's mission, internship programmes, website URLs, official contact channels and Accra location. Such information supports normal organizational transparency and is not, by itself, proof of a vulnerability. However, programme and contact details could be reused in impersonation or phishing attempts, so official-channel guidance and user awareness are worthwhile safeguards.

No confirmed breach, leaked credentials, exposed internal document or technical vulnerability was established through this limited review. Technical security conclusions would require a separately authorized assessment. The main recommendations are to keep public information accurate and intentional, reinforce verification of official communications, and document future observations with dated evidence.
